## ELECTRONIC CONTROL UNIT FOR D-18T ENGINE

The electronic control unit is designed to control and monitor the operating parameters of the D-18T aircraft turbofan engine. **The modular concept of the control unit and its easy reconfigurability allows it to be used on other types of engines, such as the D-436.**

The control unit has passed design tests, including resistance to external factors and reliability tests in accordance with RTCA DO-160G standard. The control unit is ready to flight tests on the Antonov An-124 aircraft.
